MANUFACTURING

Our manufactured products include Truck Scales, Floor Scales, Bench Scales, Hopper Scales, Cattle Scales, Hog Scales, Hog and Cattle Sorters

Our Load beam Scales are galvanized and built to the customers specifications for application such as feed tank scales on poultry farms, platform scales for the alley way or installed under a tank or hopper in any industry to monitor current inventories. If you have a weighing application that may be somewhat unique, please give us a call.

SOFTWARE SOLUTIONS

We can offer custom software packages for inventory control, traffic control for vehicle weighing, live animal weighing & sorting, batching and filling applications.

TEST WEIGHT CALIBRATION

Alectronic Scale Systems can calibrate & certify your Class F test weights and take care of all of your test weight calibration and certification needs.

SERVICE

Alectronic Scale Systems began operation in 1991 primarily as a service company covering South Western Ontario. With over 100 years of experience our highly qualified team of professionals apply their skills in the manufacturing, commercial & agricultural industries.

Our Service Department consists of factory trained technicians that are experienced on a wide range of manufacturers equipment. We can provide you with on site service or you can send your equipment into our Repair Department.

Many of our customers take advantage of the Preventive Maintenance Programs that we offer. Each service program is tailored to meet the customers individual needs whether they be ISO 17025 or ISO 9002 calibrations and documentation. Scheduled Inspections can be performed on a quarterly, semi-annual or annual basis. We will maintain your calibration records in our files for a period of three years should your files become lost or damaged.

To discuss a Preventive Maintenance Program to meet your companies needs please call to speak to one of our representatives.
